Overview

In this task, you will be presented with two short texts, Text A and B. Text B is an updated version of Text A. Your task is to formulate a question in such a way that the answer can only be derived from Text B.

Steps

Step 1

To complete the task, try to start the question with a question word *(f.i. how, who, what)*. We show a few examples in Table 1. Write the question that you formulated in **question_1.**

Text A	Text B	Question	Answer that can only be derived from Text B
Remember that **they** may have experienced emotions from your break up that you never knew about or understood .	**Your ex** may have experienced emotions from your break up that you never knew about or understood .	**Who** experienced emotions from your break up that I never knew about or understood?	Your ex.
This will open the DGN file in AutoCAD .	This will open the DGN file in AutoCAD **after converting it to the DWG format .**	**When** will this open the DGN file?	After converting it to the DWG format.
If bone has pierced through the skin of your broken toe , there is a risk of infection .	If bone has pierced through the skin **(this is known as an open fracture)** , there is a serious risk of infection .	**How** is it known when the bone has pierced through the skin?	An open fracture.
You can sleep with the hairstyle .	You can sleep with the hairstyle , **as nothing will happen.**	**Why** can I sleep with the hairstyle?	As nothing can happen.

Table 1 - Examples of questions that can be constructed from several text pairs, in which the answer to these questions can only be derived from Text B.

However, any other question that you can come up with counts as a valid question, as long as the answer to the question can only be derived from Text B (see Table 2).

Text A	Text B	Question	Answer that can only be derived from text B
Have you ever been humiliated?	Have you ever been humiliated by your best friend?	**By whom** have you ever been humiliated?	By your best friend.

Always look on the bright side and never give up .	Always look on the bright side and never give up hope **in what you believe in .**	**In what** should you never give up hope?	In what you believe in.

Table 2 - Examples of questions that do not start with question word and their corresponding text pairs.

Some text pairs trigger more than one valid question, such as in the example below:

Text A: Keep hair in the milk for 10 minutes , then wrap a bag on it for 30 minutes .
Text B: Keep your hair in the milk for 10 minutes , then c**over your head with plastic wrap** and **let it sit** for another 30 minutes .

Here, two valid questions are:
    Q1: With what should you cover your head?
    A1: With (a) plastic wrap.

    Q2: What should I do for another 30 minutes?
    A2: Let it sit.

Submit two questions when there is more than one valid question (but not more than two). Write the first question **question_1** and the second one in **question_2.**

Step 2

If you didn't manage to come up with a question, mention the letter (A,B,C,D,E) corresponding to the reason in **reason_no_question**. The options are:

A) Words/phrases from Text A are not part of Text B, such as in the example below:

 Text A: Baobab by itself tastes like diluted lemonade , **very refreshing after a hard workout.**
 Text B: Baobab by itself tastes like diluted lemonade .

B) The meaning of the texts are the same, such as the examples in Table 3.

Text A	Text B
First of all , Amy has great hair .	To begin with , Amy has great hair .
In addition, the sooner you get the information to your boss , the sooner they can take it to their boss , if they 're not the head of the company ..	The sooner you get the information to your boss, the sooner they can take it to their boss , if they 're not the head of the company

Table 3 - Examples of text pairs in which it is difficult to come up with a question in which the answer can only be derived from Text B.

C) The texts are the same because the only difference between them is spelling/typo/grammar/case.

D) The texts do not contain sentences, as in the example below:

Text A: [[Category : Model Making]]
Text B: [[Category : Model Castles]]

E) Other reason.

Answer A, B,C,D, E in **Reason_no_question.** Mention the reason why you did not manage to formulate a question if the answer is E.
